shin.quipit@gmail.com

Poblacion Muntinlupa, NCR - First District, Philippines

Summary

Infrastructure engineer with 10 years across Azure and AWS, designing and operating production platforms on Kubernetes (AKS, EKS) for regulated financial-services environments in the EU and US. Familiar with bare-metal Kubernetes and the underlying hardware, networking, and storage fundamentals beyond managed services. Increasingly focused on architectural ownership — setting technical direction, mentoring engineering teams, and translating business and compliance constraints into platform decisions. Comfortable with asynchronous remote work, using writing to clarify decisions and build institutional memory, and owning systems end-to-end through to incident response.

Professional Experience

DevOps Lead December 2024 – Present

SwissPine Tech. Geneva, Switzerland

Leading the technology team's transition to modern platform engineering practices for a Swiss fintech serving private equity and venture capital funds.

Key Responsibilities

- Set technical direction and mentor the core technology team through the organization's transition to modern DevOps practices, establishing engineering standards, review processes, and architectural decision records as institutional memory.
- Lead and coordinate deployment and release processes across multiple client environments in the EU and US, owning rollout strategy, change management, and stakeholder communication.
- Define and enforce security and compliance posture across infrastructure and applications, aligning practices with the regulatory expectations of a financial-services client base.
- Partner with engineering leadership to translate business and compliance requirements into platform capabilities and roadmap decisions.

DevOps Engineer June 2024 – December 2024

SwissPine Tech. Geneva, Switzerland

Key Responsibilities

- Architected the migration from legacy Docker/VM infrastructure to Kubernetes — designed cluster topology, ingress, secrets management, and tenant isolation; coordinated phased rollout across EU and US client environments.
- Designed and maintained CI/CD pipeline, cutting deployment time and reducing manual release errors through automated gates and progressive delivery.
- Tuned database performance and built automated, secure backup and restore strategies, validated through periodic restore drills.

- Built automation frameworks for provisioning, configuration, and routine operations, reducing toil and freeing the team for higher-value work.

DevOps Engineer September 2020 – March 2024

Coherent Technologies Inc. 31/F Hysan Place, 500 Hennessy Road, Causeway Bay, Hong Kong

Key Responsibilities

- Led a multi-cloud migration across AWS and Azure, delivering scalable infrastructure and ~20–25% cost reduction while improving observability and uptime.
- Designed and maintained CI/CD pipelines and release processes across multiple concurrent projects and environments, reducing deployment errors and accelerating delivery.
- Implemented centralized monitoring and logging, improving system visibility and enabling faster incident response, root cause analysis, and resolution.
- Administered and tuned production databases, owning performance optimization, automated secure backups, and data integrity across the platform.

Senior Software Developer March 2019 – September 2020

AXA Group Operations 39th Floor, GT International Tower, HV Dela Costa, Makati, Philippines

Key Responsibilities

- Led the end-to-end development of an enterprise chatbot application, improving customer engagement and response efficiency.
- Collaborated closely with cross-functional teams in an Agile/Scrum environment, participating in sprint planning, daily stand-ups, and retrospectives.
- Developed, tested, and maintained core application components, ensuring code quality and performance optimization.
- Diagnosed and resolved complex application and system issues, minimizing downtime and improving reliability.
- Directed deployment and release activities, coordinating with operations teams for seamless production rollout and version management.

Senior Software Developer March 2017 – March 2019

Chatbot Philippines Unit 3406, 34th Floor, Raffles Corporate Center, Emerald Ave. Ortigas Center, Pasig City, Philippines

Key Responsibilities

- Led software development and system architecture for chatbot and automation solutions, ensuring scalability and maintainability.
- Administered and optimized databases, focusing on performance tuning, secure backups, and high availability.
- Mentored junior developers, providing technical guidance, code reviews, and knowledge-sharing sessions to strengthen the development team.
- Collaborated with operations and business teams to gather client requirements, translate business needs into technical solutions, and ensure successful project delivery.
- Managed and optimized cloud services on Azure, improving system efficiency, uptime, and overall platform reliability.

Systems Programmer September 2016 – March 2017 (Contractual)

BSFIL Technologies Inc. South Center Tower, Madrigal Business Park, Alabang, Muntinlupa City, Philippines

Key Responsibilities

- Maintained legacy VB6 and PHP applications and supported database administration for internal business systems.

Independent Work

- Operate a multi-node bare-metal Kubernetes cluster on Talos Linux, exploring Rook-Ceph for distributed storage and evaluating CNI alternatives.
- Manage cluster lifecycle and application delivery through GitOps workflows (FluxCD/ArgoCD).

Education

Bachelor of Science – Information & Communications Technology, 2012 – 2016
STI College

Technical Skills

Platform & Orchestration – Kubernetes (managed and bare-metal), Docker, Helm, Nginx, APISIX

Infrastructure as Code – Terraform, Terragrunt, Ansible

Storage – Distributed (Ceph, Rook); Object (S3, Azure Blob); Kubernetes persistent volumes and CSI

CI/CD & GitOps – GitHub Actions, Azure DevOps, CircleCI, FluxCD, ArgoCD

Cloud – Azure, AWS

Observability – Elastic Stack, Sentry, Grafana, Prometheus, Uptime Kuma

Databases – Relational (PostgreSQL, MS SQL Server, MySQL); NoSQL (MongoDB, CosmosDB, DynamoDB); Analytics (Snowflake, Databricks)

Languages – JavaScript, Bash, Python, Go

Operating Systems – Linux (Ubuntu/CentOS/Talos), macOS, Windows
